

the SecretPi !

Milestone in privacy & protection

- Have you ever been concerned about your privacy ?
- Want to protect your data in transit ?
- You need to overcome geoblocking or other blocking mechanisms in your country ?
- Are you living in a country where human rights do not count ?
- Your profession exposes you to the authorities or opponents ?
- Your competitors or an evil country want your company secrets ?
- You have to send or store confidential data, which should not fall into the wrong hands, as your and maybe other lives or liberty could be in danger ?
- You maybe have to run and can't leave evidence ?
- Or you simply want to keep your data safe ?

SecretPi is the solution: small, easy to hide, powerful, autonomous, equipped with self-destruction and other security features !

the SecretPi was developed to protect you, your life and your data !

How often do we see, that editors or reporters and even normal people are jailed or even killed because they use the freedom of speech against retaliation, censorship or sanction, to let the world know what is really going on.

SecureGlobal has developed the SecretPi to help people to protect their data from interception, harvesting and analysis by 3rd parties.

Our aim is to offer a bulletproof system, which protects your data. The SecretPi was constructed in a way that it self-destructs, when in wrong hands, it is booby-trapped.

Our tests have shown that the SecretPi is nearly undetectable, provides stealth mode and allows multi level encryption.

SecureGlobal GmbH

Kreuzstrasse 41
D-47226 Duisburg (Germany)
www.secretpi.eu

file encryption on the fly, encrypted data transfer

If you want to learn more about possible scenarios the SecretPi was build for: <https://www.secretpi.eu>

different kit's for different purposes.....

We have created different kits for different needs. The base kit is the home or small office kit which contains:

- Raspberry Pi 3B with 64GByte SD
- International USB Power Adapter 3A with on/off switch
- WLAN USB Adapter
- LAN USB Adapter
- 1x NFC-Ring, 1x NFC Card
- Quick Start Manual
- Unlimited Access to User Groups
- 1 year Support, 2 years Warranty
- Individual configurations
- 2 years free Updates and Upgrades

The dissident kit has all from the kit above, plus the following additional extras:

- Powerbank > 12.000 mAh
- Car USB Power Adapter
- Peli-Case watertight, rugged

The war reporter kit has all from both kits above, plus these additional extras:

- Rugged housing (strong aluminum), housing is the heat sink, no fan, instead of the acrylic housing with fan.

Screen not included

"Hand in hand with freedom of speech goes the power to be heard, to share in the decisions of government which shape men's lives."

Customers first !

The SecretPi comes with a quick start manual which makes it easy to get running. Only a few settings are necessary. In addition, a full manual is available on the SecretPi support section of our website. Furthermore our 1 year free support by phone and remote assistance (renewable) helps you when problems occur. The FAQ pages give you tips and tricks to integrate the SecretPi in your environment.

If you want to know what other users are doing with the SecretPi, our user-forum is the ideal platform to exchange experiences.

When you order the SecretPi, we will provide a form, that we can configure the device to your needs and environment. Furthermore we will program the NFC-Booby-trap individually to you as well as the passwords and the username, that no one else can tamper with your device.

Why is the SecretPi so safe to use ?

- NFC Booby-trap and encrypted file-system booby-trap with self-destruction when in wrong hands
- VPN Encryption
- Stealth –Mode (undetected when scanned) towards the internet
- Telegram chat application with end to end encryption and secure groups with self-destructive messages
- GnuPG Nautilus file-manager for individual encryption of files
- Team-Viewer for secured remote access
- Power-Bank can act as a UPS
- Rugged version for war reporters in hostile environments
- Autonomous use, SecretPi has the OpenOffice Suite "on board", you can use the device as a standalone machine, no extra PC needed, encrypted VoIP installed
- Reconnects automatically, every time.
